## Lab Description

This laboratory exercise involved using an op amp as a DC inverting amplifier, DC non-inverting amplifier, AC inverting amplifier, AC non-inverting amplifier, and a summing amplifier. Each circuit was tested at different voltages where the result was both measured and calculated.

The op amp was also used to create a low pass filter, a high pass filter, and a band pass filter. The values of the required components were calculated and the circuits were tested at different frequencies. The results were measured and then graphed to show the frequency response and phase shift of each filter.

## Schematics

A wiring diagram for the DC motor was created and is shown in Figure 1.

# Exercise 6: Motor Control

Student's Name: Mohammad Farid Trent Wesley Section: 1

PreLab		Point Value	Points Earned	Comments
PreLab	Motor Calculations	10	10	AST 10/17
	H-Bridge Questions	10	10	AST 10/17

Demo		Point Value	Points Earned	Date
Demo	20% Duty Cycle at 10kHz	10	10	AST 10/25
	DC Motor Functionality	5	5	MT 10/30
	Stepper Motor Functionality	5	5	MT
	Servo Motor Functionality	5	5	MT 10/30
	Simultaneous TI Car Motors-Servo Motor	15	15	AST 11/1

To receive any grading credit students must earn points for both the demonstration and the report.
